

qlGen – ICP-Driven Qualified Lead Generation Tool

Hackathon Functional Brief (8-Hour Build)

"Build a config-driven system that converts a detailed ICP (Ideal Customer Profile) into a sales-ready list of target companies and decision-makers, complete with BANT scoring."

1. Purpose of This Document

This document defines **what to build**, not **how to build it**.

It provides a **clear, bounded functional specification** for hackathon teams to implement a working prototype of a **Qualified Lead Generation Tool** for a software services company.

The goal is **alignment**, **speed**, and **demonstrable value** at the end of 8 hours.

2. Business Objective

Sales needs a **ready-to-use list of high-quality target accounts and decision-makers**, not inbound leads.

Objective of qlGen

Convert a clearly defined **Ideal Customer Profile (ICP)** into a **sales-ready list of companies and relevant contacts**, enriched with context and BANT scoring (Budget, Authority, Need, Timeline)

The tool must answer:

"Which companies should we approach, who should we talk to, and how strong is the opportunity?"

3. Scope for Hackathon

In Scope

- ICP / configuration-driven input
- Company discovery & qualification
- Contact discovery per company
- Structured lead list output
- Explainable BANT scoring

Explicitly Out of Scope

- Inbound forms or campaigns
- CRM workflows
- Email automation
- Closed-loop sales feedback

This is a lead *generation* and *qualification* tool, not a lead *management* system.

4. Primary Users

Sales / Account Management

- Consumes the output list
- Uses it for outbound targeting

Marketing / Growth

- Defines ICP and targeting rules
- Refines configurations

5. High-Level Functional Flow

ICP Configuration → Company Qualification → Contact Discovery → Scoring → Output List

6. Functional Modules

6.1 ICP Configuration Module (Core user Input)

Purpose: Define what a “qualified lead” looks like.

- The user provides the inputs to define the ICP.
- System should provide the option to save the ICP input each time
- The user can provide a different ICP input

Inputs (Config-Driven):

- Target offering
- Target regions
- Industry types & verticals
- Company size (employees & revenue)
- Technology maturity indicators
- Infrastructure readiness indicators
- Digital transformation drivers
- Leadership traits

Sample input with sample values:

Config parameter	Sample value
Offerings	Digitization of factory floor of mid-segment factories
Regions	Kerala: Kochi, Palakkad industrial clusters
	Tamil Nadu: Coimbatore, Hosur, Chennai

	Karnataka: Bengaluru	
Industry Type	Discrete Manufacturing	Automotive (OEMs & Tier 1/2)
		Electrical
		Machinery and Tooling
	Process Industries	Food & Beverage
	Energy-Intensive Industries	Cement
Company Size	MSME factories	100–500 employees
	Mid-sized factories	500–2000 employees
	Annual revenue	₹200Cr to ₹2000Cr
	Multi-line or multi-shift operations	
Technology Maturity	Currently using or planning to adopt:	
	SCADA, MES, or ERP systems	
	Energy monitoring or quality tracking tools	
	Manual or semi-digital dashboards (Excel-based)	
Infrastructure Readiness	Presence of PLCs, sensors, meters, or smart energy devices	
Digital Transformation Drivers	Seeking operational visibility	
	Want to reduce downtime or improve OEE	
	ESG or sustainability reporting needs	
	Compliance and audit readiness	
Leadership Traits	Forward-thinking plant heads or digital champions	
	Participates in CII/IEEMA/ASSOCHAM/Smart Manufacturing events	
	Roadmap for Digital Transformation or Industry 4.0	

Sample input with sample values:

Ideal Customer Profile (ICP) — MidMarket US ECommerce Software Services 2026	
Target: Midsize US ecommerce companies scaling operations, modernizing tech stack, and seeking software services partnerships	
1. TARGET OFFERING	
Service Area	
Platform engineering & replatforming (headless commerce, microservices)	
Custom storefront development (React/Next.js, Shopify Plus, BigCommerce)	
Order management & fulfillment automation	
AI/MLpowered product recommendations and personalization engines	
Inventory & supply chain integration (ERP/WMS connectors)	
Customer data platform (CDP) implementation and integration	

Performance engineering – site speed, Core Web Vitals optimization

DevOps, CI/CD pipeline setup, and cloud infrastructure management

2. TARGET REGIONS

Country

United States

Priority States

California, New York, Texas, Florida, Washington, Illinois, New Jersey, Georgia, Pennsylvania, Ohio

3. INDUSTRY TYPES & VERTICALS

Vertical

Fashion & Apparel

Beauty, Health & Wellness

Consumer Electronics & Gadgets

Home Goods & Furniture

Sporting Goods & Outdoor

Food & Beverage (D2C)

Pet Products

Toys & Kids Products

4. COMPANY SIZE

Parameter

Range

Employees

50 – 1,500

Annual Revenue (USD)

\$10M – \$500M

5. TECHNOLOGY MATURITY (Level: Mid)

Signals

Running on Shopify Plus, BigCommerce Enterprise, Magento 2 (Adobe Commerce), or commercetools

Evaluating headless / composable commerce architecture

Using Klaviyo, Attentive, or similar for marketing automation
Integrated with NetSuite, SAP B1, or Microsoft Dynamics for ERP
Deploying AI tools for search (Searchanise, Constructor.io) or recommendations
Actively using Google Analytics 4, Segment, or Amplitude for analytics
AWS, GCP, or Azure cloud hosting (not shared hosting)
Legacy Magento 1 / WooCommerce migration overdue
Monolithic architecture limiting feature release velocity
Multiple disjointed point solutions lacking unified data layer

6. INFRASTRUCTURE READINESS

Status
Cloudhosted storefront (AWS / GCP / Azure) – NOT on shared cPanel hosting
APIfirst or APIavailable commerce platform (supports integrations)
Some CI/CD pipeline in place (even basic GitHub Actions or Bitbucket Pipelines)
Dedicated staging / preproduction environment exists
Thirdparty logistics (3PL) integrated via API or EDI
Payment gateway supports international currencies (Stripe, Braintree, Adyen)
Basic CDN in use (Cloudflare, Fastly, or platformnative CDN)

7. DIGITAL TRANSFORMATION DRIVERS

Category	Driver
Growth Trigger	YoY revenue growth >20% stressing existing infrastructure and team capacity
Growth Trigger	Recently received Series A/B funding or PE investment earmarked for tech
Growth Trigger	Expanding into new geographies or sales channels in next 12 months
Growth Trigger	Preparing for an IPO or acquisition and needing scalable tech posture

Operational Pain	Site performance degrading during peak traffic – losing revenue
Operational Pain	Manual order management and reconciliation consuming team bandwidth
Operational Pain	Disconnected data silos making personalization and reporting difficult
Operational Pain	Slow time to market for new features due to legacy platform constraints
Operational Pain	High cart abandonment rates with no optimization capability
Competitive Pressure	Competing against Amazon or D2C brands with superior digital experience
Competitive Pressure	Customer acquisition costs rising – need better retention and LTV tooling
Competitive Pressure	Losing market share to competitors with faster, more personalized storefronts
Strategic Initiative	Launching mobile app or PWA for improved shopping experience
Strategic Initiative	Implementing loyalty / subscription / membership program
Strategic Initiative	Building unified customer data profile (CDP) for omnichannel marketing
Strategic Initiative	International expansion requiring localization, multicurrency, multilingual support
Strategic Initiative	Sustainability / ESG reporting requiring new data infrastructure

8. LEADERSHIP TRAITS	
Target Roles	
CEO / CoFounder (owns tech budget in early/mid stage)	
CTO / VP of Engineering	
Chief Digital Officer (CDO)	
VP / Director of ECommerce	
VP / Director of Technology	
Head of Product	

VP of Marketing / Growth (influences martech & personalization spend)
Behavioural Traits
Datadriven decision maker – references metrics (CVR, ROAS, LTV, CAC) in conversation
Founder / operator mindset – focused on ROI and speed to value
Open to vendor partnerships (not insisting on building everything inhouse)
Active on LinkedIn sharing ecommerce and tech content
Attends Shoptalk, eTail, NRF, or similar industry events
Previously experienced a platform migration or major tech overhaul

6.2 Company Discovery & Qualification Module

Purpose: Identify companies that match the ICP.

The System takes the ICP definition inputs from the end user and identifies companies that qualify as ICP

Functional Expectations:

- Identify companies matching:
 - Geography
 - Industry
 - Size
 - Operational & tech maturity signals
- Discard companies that clearly do not fit

Output:

- A list of **qualified target companies**

6.3 Contact Discovery Module

Purpose: Identify relevant people within each company.

The System takes the list of qualified target companies and makes a list of decision makers within each company

Target Roles (Examples):

- Plant Head
- Operations Head
- Engineering Head
- Digital Transformation Lead
- Quality / Energy / Compliance leaders

Functional Expectations:

- Multiple contacts per company
- Role relevance matters more than volume

Output:

- A list of **decision makers** within each target company

6.4 Contact Enrichment Module

Purpose: Make leads sales-usable.

The System takes the list of decision makers and enriches them with additional information

Desired Attributes (where possible):

- Name
- Designation
- Company
- City / region
- Website
- LinkedIn, email, phone

Note: Partial data is acceptable if clearly indicated.

6.5 BANT Scoring Module (Explainable)

Purpose: Indicate opportunity strength.

Scoring Dimensions:

- Budget likelihood (based on company size & maturity)
- Authority (role seniority & relevance)
- Need (alignment with transformation drivers)
- Timing (signals of readiness)

Output:

- Simple BANT score per contact or per company
- Must be explainable (no black boxes)

6.6 Output Generation Module (Final Deliverable)

Purpose: Produce a sales-ready artifact.

Output Format:

- List of qualified leads
- Export as a downloadable Spreadsheet
- Columns include:
 - Company name
 - Website
 - Geo / city

- Contact name
- Designation
- Linkedin
- Email
- Phone
- BANT score

Output Format:

Seria l#	Company name	Website	Geo/ City	Contact name	Designation	LinkedIn	Email	Phone	BANT Score
1	ABC	abc.com	City01	Name01	Designation01				
2	ABC	abc.com	City01	Name02	Designation02				
3	ABC	abc.com	City01	Name03	Designation03				
4	XYZ	xyz.com	City02	Name04	Designation01				
5	XYZ	xyz.com	City02	Name05	Designation02				
6	PQR	pqr.com	City03	Name06	Designation01				
7	PQR	pqr.com	City03	Name07	Designation02				
8	PQR	pqr.com	City03	Name08	Designation03				
9	PQR	pqr.com	City03	Name09	Designation04
