1. What is qlGen?

qlGen helps you build a pipeline of qualified leads in minutes. You define your Ideal Customer Profile (ICP) — the type of company and decision-maker you want to sell to — and qlGen's AI agent automatically:

1. Discovers companies matching your criteria (via web sources or LinkedIn Sales Navigator)
2. Finds key contacts (decision-makers) at each company
3. Enriches contact details — emails, phone numbers, LinkedIn profiles
4. Scores every lead using the BANT framework (Budget, Authority, Need, Timing)

The result is a sales-ready list you can export to Excel and start working immediately.

qlGen Home Page — Start your search or explore past results

2. Navigation

The top navigation bar provides quick access to all sections of the application:

Menu Item	What It Does
Home	Landing page with quick-start buttons
Dashboard	Overview of searches, stats, and Evaboot credit balance
All Leads	View qualified leads across all searches
Saved ICPs	Your saved Ideal Customer Profiles (reusable)
Tools	Tool availability and rate limits (admin only)
Users	User management (admin only)
Feedback	Feedback management (admin only)

The top-right corner features a Help menu (question mark icon), your profile avatar, and the Gadgeon logo. The AI Co-pilot can be opened by clicking the sparkle button in the bottom-right corner of any page.

3. Getting Started: Your First Search

Step 1 — Create a New Search

From the Home page, click "Start Your Search". This opens the ICP Configuration wizard. Alternatively, click "+ New Search" from the Dashboard or the Saved ICPs page.

Step 2 — Fill in the 7-Step ICP Wizard

The wizard walks you through defining your ideal customer. Each step captures a different dimension. You can navigate between steps freely by clicking the step numbers on the left sidebar.

Step 3 — Watch the Pipeline Run

After clicking "Save & Run Search", the Pipeline Progress page shows the AI agent working in real time with a live activity log. You can safely leave — results are saved automatically.

Step 4 — View Results & Export

When the search completes, view your results on the Search Results page with Companies, Pipeline Funnel, Search Criteria, and Search Summary tabs. Export to Excel or CSV anytime.

4. The 7-Step ICP Wizard

Step 1: Discovery Source

Choose how companies should be discovered. This controls Stage 1 (Industry Discovery) and Stage 2 (Firmographic Fit). Stages 3–5 (Signals, Contacts, Scoring) run the same regardless of your choice.

Mode	Description	Credits
qlGen Multi-Source	Apollo, Exa, DuckDuckGo, registries, and more. Default mode.	Free
Sales Navigator Only	Extracts from LinkedIn Sales Navigator via Evaboot. Pipeline fails if extraction fails.	1 credit/profile
Sales Nav + qlGen (Hybrid)	LinkedIn data combined with qlGen multi-source for max coverage. Falls back to qlGen-only if extraction fails.	1 credit/profile

The screenshot shows the 'SEARCH CRITERIA CONFIGURATION' interface for 'New Search Criteria'. On the left, a vertical sidebar lists seven steps: 1. Discovery Source (highlighted), 2. Firmographics, 3. Capability, 4. Urgency, 5. Budget, 6. Authority, and 7. Review. The main content area is titled 'How should companies be discovered?' and includes a subtext: 'This controls Stage 1 (Industry Discovery) and Stage 2 (Firmographic Fit). Stages 3–5 (Signals, Contacts, Scoring) run the same regardless.' Three radio button options are presented: 'qlGen Multi-Source' (selected, with a description: 'Apollo, Exa, DuckDuckGo, registries, and more. No extra credits needed.'), 'LinkedIn Sales Navigator Only' (with a description: 'Extract companies & contacts from your Sales Navigator search via Evaboot (1 credit/profile).'), and 'Sales Navigator + qlGen (Hybrid)' (with a description: 'LinkedIn data combined with multi-source discovery for maximum coverage. Uses Evaboot credits.'). A 'Next' button is located at the bottom right of the configuration box. The top navigation bar includes links for Home, Dashboard, All Leads, Saved ICPs, Tools, Users, Feedback, and a user profile icon. A Gadgeon logo is in the top right corner.

Step 1: Discovery Source — qlGen Multi-Source selected (default)

Sales Navigator Mode

When you select a Sales Navigator mode (Sales Navigator Only or Hybrid), additional options appear:

1. Evaboot Account Status is displayed — showing Credits Available, Daily Usage, and Sales Nav Session status
2. Paste your Sales Navigator URL — copy the URL from your LinkedIn Sales Navigator search bar
3. Auto-fill from URL — qlGen extracts filters (industry, geography, company size, roles) and pre-fills your ICP fields
4. "Fill remaining with AI" button — AI generates missing fields (urgency signals, budget signals, etc.) based on context

SEARCH CRITERIA CONFIGURATION

- 6 Authority
- 7 Review

How should companies be discovered?
This controls Stage 1 (Industry Discovery) and Stage 2 (Firmographic Fit). Stages 3–5 (Signals, Contacts, Scoring) run the same regardless.

☐ **qlGen Multi-Source**
Apollo, Exa, DuckDuckGo, registries, and more. No extra credits needed.

☒ **LinkedIn Sales Navigator Only**
Extract companies & contacts from your Sales Navigator search via Evaboot (1 credit/profile).

☐ **Sales Navigator + qlGen (Hybrid)**
LinkedIn data combined with multi-source discovery for maximum coverage. Uses Evaboot credits.

Evaboot Account Status

CREDITS AVAILABLE	DAILY USAGE	SALES NAV SESSION
8,061	12 / 2500	Connected

* Sales Navigator URL

<https://www.linkedin.com/sales/search/...>

Paste a Sales Navigator search or saved list URL. Narrow your search in Sales Navigator first to control credit usage.

Credit Usage Policy

- 1 credit per profile extracted from your Sales Navigator search
- 1 credit per email found for each contact
- 0.5 credit per email validation

Sales Navigator Only selected — Evaboot account status and URL input

Auto-Fill from Sales Navigator URL

When you paste a Sales Navigator search URL, qGen automatically extracts the filters and pre-fills your ICP wizard fields. You'll see a green summary showing which filters were extracted (Industry, Company Headcount, Region) and which fields still need input.

The screenshot shows the 'New Search Criteria' configuration page in qGen. The sidebar on the left lists steps: 1. Discovery Source (selected), 2. Firmographics, 3. Capability, 4. Urgency, 5. Budget, 6. Authority, and 7. Review. The main content area is titled 'SEARCH CRITERIA CONFIGURATION' and 'New Search Criteria'. It asks 'How should companies be discovered?' and offers three options: 'qGen Multi-Source', 'LinkedIn Sales Navigator Only' (selected), and 'Sales Navigator + qGen (Hybrid)'. Below this is the 'Evaboot Account Status' section showing 'CREDITS AVAILABLE: 8,061', 'DAILY USAGE: 12 / 2500', and 'SALES NAV SESSION: Connected'. A 'Sales Navigator URL' field contains a complex LinkedIn search URL. Below the URL, a green box displays 'Filters extracted from URL' with details: 'INDUSTRY: Financial Services, Banking', 'COMPANY_HEADCOUNT: 51-200, 201-500', and 'REGION: United Kingdom, United Kingdom'. A note at the bottom states 'Not in URL: Revenue Range, Offerings, Urgency Signals, Budget Signals, Target Roles'.

Filters extracted from Sales Navigator URL — Industry, headcount, and region auto-filled

Tip: Narrow your search in Sales Navigator first to control Evaboot credit usage. The more targeted your search, the fewer credits consumed.

Note: Saved list URLs don't contain filter parameters, so auto-fill won't work. Use a search URL instead, or fill fields manually.

Step 2: Firmographics

This step defines your company targeting criteria. When using Sales Navigator mode, an info banner reminds you that discovery is handled by your Sales Nav URL — these criteria are used by the AI agent to score each company's fit.

- Name (required): Give this search a descriptive name
- Description: Optional short summary
- Industry Verticals: Add one or more with optional sub-verticals
- Target Countries: e.g., United States, United Kingdom
- Employee Count Range: Min and max headcount
- Revenue Range: Currency, min, and max revenue
- Low Cost Center: Toggle for companies with low-cost center operations

The screenshot shows the 'Step 2: Firmographics' form. At the top, a blue banner states 'Extracted 3 filter(s) from Sales Navigator URL'. The form fields are as follows:

- Name:** Financial Services & Banking - United Kingdom & United Kingdom - 51-500 emp
- Description:** Brief description of this search criteria...
- Industry Verticals:**
 - Financial Services (Sub-vertical: optional) [Remove]
 - Banking (Sub-vertical: optional) [Remove]
 - + Add Industry
- Target Countries:** United Kingdom x United Kingdom x (e.g., United States) [Add]
- Employee Count Range:** Min 51 to Max 500
- Revenue Range:** USD Min 10,000,000 to Max 500,000,000
- Low Cost Center:** Target companies with low-cost center operations (toggle off)

Navigation buttons: Previous, Next. A purple star icon is in the bottom right corner.

Step 2: Firmographics — auto-filled from Sales Navigator URL

Tip: Click "Create with AI / Upload" at the top to pre-fill the wizard. You can describe your ideal customer in plain English or upload a file (PDF, DOCX, XLSX, TXT, CSV).

Step 3: Capability

Define the products or services you want to sell (Target Offerings / Service Areas). Press Enter or click "Add" after typing each one. Choose AND (company must match ALL) or OR (company must match ANY).

The screenshot shows the 'qlGen' application interface. The top navigation bar includes links for Home, Dashboard, All Leads, Saved ICPs, Tools, Users, Feedback, and a user profile icon. The main content area is titled 'SEARCH CRITERIA CONFIGURATION' and 'New Search Criteria'. On the left, a vertical sidebar lists steps: 1. Discovery Source, 2. Firmographics, 3. Capability (highlighted), 4. Urgency, 5. Budget, 6. Authority, and 7. Review. The main form area has a 'Target Offerings / Service Areas' section with a text input field containing 'e.g., Platform engineering & replatforming' and an 'Add' button. Below this is a 'Match Condition' section with two radio buttons: 'AND' (selected) and 'OR'. The 'AND' option is described as 'Company must match ALL offerings', and the 'OR' option is described as 'Company must match ANY offering'. At the bottom of the form are 'Previous' and 'Next' buttons. A purple circular icon with a star is visible in the bottom right corner of the interface.

Step 3: Capability — Target offerings and match condition

Step 4: Urgency

Add free-form urgency signals that indicate a company has an urgent need, e.g., "Recent funding round", "Leadership change", "Regulatory deadline". Choose AND or OR match condition.

[Previous](#) [Save Only](#) [Run Pipeline](#)

Step 7: Review — Summary with Sales Navigator discovery source

5. LinkedIn Sales Navigator Integration

What It Is

qlGen integrates with LinkedIn Sales Navigator through Evaboot, a third-party service that extracts profile data from your Sales Navigator searches. This lets you combine LinkedIn's curated B2B database with qlGen's AI-driven qualification pipeline.

How It Works

1. Build a search in Sales Navigator — apply filters for industry, geography, company size, job titles, seniority
2. Copy the URL from your Sales Navigator search bar
3. Paste it into qlGen when creating a new ICP (Step 1: Discovery Source)
4. qlGen auto-extracts your filters from the URL and pre-fills the ICP wizard
5. When you run the pipeline, Evaboot asynchronously extracts companies and contacts
6. qlGen's AI agent then scores, enriches, and qualifies every company through the 5-stage pipeline

Choosing the Right Mode

Scenario	Recommended Mode
No Sales Navigator account	qlGen Multi-Source
Highly curated Sales Nav search	Sales Navigator Only
Want maximum coverage	Sales Nav + qlGen (Hybrid)
Low Evaboot credits	qlGen Multi-Source
Large search + want to supplement	Sales Nav + qlGen (Hybrid)

Evaboot Credits

- 1 credit per profile extracted from a Sales Navigator URL
- 1 credit per email found for each contact
- 0.5 credit per email validation
- Check your balance on the Discovery Source step or the Dashboard

- Minimum 10 credits required to start a Sales Navigator extraction
- Maximum credits per run is capped at 500 by default
- If credits run out mid-extraction, partial results are still processed

Troubleshooting

Issue	Solution
"Evaboot Not Configured"	Ask your admin to add EVABOOT_API_KEY to the environment
"Sales Nav Session Expired"	Re-link your Sales Navigator account in the Evaboot dashboard
"Insufficient credits"	Top up your Evaboot account or switch to qlGen Multi-Source
Saved list URL no auto-fill	Saved lists don't have filter params — use a search URL or fill manually

6. Pipeline Progress

After starting a search, the Pipeline Progress page shows the AI agent working in real time. The pipeline runs through multiple stages:

- Industry Discovery — finds companies matching your ICP criteria
- Firmographic Fit — evaluates company size, revenue, geography match
- Review & Select — you review discovered companies and select which to continue with
- Signal Research — evaluates budget and urgency signals for selected companies
- Contact Discovery — finds decision-makers at each qualified company
- Final Ranking — BANT scoring and final lead qualification

A progress bar at the top shows which stages are complete. You can choose how signal research runs: Both at Once (faster), Budget First, or Urgency First.

REVIEW GATE 1

Review Firmographic Fit — Medical Equipment Manufacturing - 51-200 emp

Back to Dashboard

Progress: Industry Discovery (View results) — Firmographic Fit (View results) — **Review & Select** — Signal Research — Contact Discovery — Final Ranking

Signal Research Mode

Choose how to evaluate Budget and Urgency signals for selected companies:

- ☒ **Both at Once**
Run budget and urgency signal research together. Faster, one review gate.
- ☐ **Budget First**
Evaluate budget signals first, review, then urgency. Two review gates for tighter control.
- ☐ **Urgency First**
Evaluate urgency signals first, review, then budget. Two review gates for tighter control.

Continue with 3 Companies

	Company	Industry	Country	Employees	Revenue	Fit Score	Reasoning	Status
+ ✓	Philips Medizin Systeme Böblingen ohscar.com	Medical Device	Germany	145	-	N/A	Country 'Germany' not in target geography: united states	Low Fit
+ ✓	INTERNET DE CV internet.com.mx	Medical Device	Mexico	179	-	N/A	Country 'Mexico' not in target geography: united states	Low Fit

1 Row selected

Pipeline Progress — Review gate with discovered companies and fit scores

When using Sales Navigator mode, you'll see additional activity: Evaboot credit check, async extraction, polling for completion, and companies being parsed from LinkedIn data.

Tip: You can safely leave this page. Results are saved automatically. Come back anytime via the Dashboard.

7. Viewing Your Results

When the search completes, the Search Results page has four tabs:

Companies Tab (default)

A table of all discovered companies with their key metrics:

Column	What It Shows
Company	The discovered company name
Industry	Company industry classification
Country	Company location
Revenue	Estimated annual revenue
Asset Value	Estimated asset value
Final Score	Lead quality score
Budget	Budget signal score
Urgency	Urgency signal score
Contacts	Number of contacts found

Click any row to expand it and see Company Insights (ICP match, revenue, employee count, tech stack) and detailed BANT Breakdown with scores and reasoning.

Pipeline Funnel Tab

Visual funnel showing how companies progress through each pipeline stage, with counts at each stage showing how the AI filtered and qualified companies.

Search Criteria Tab

Shows the ICP configuration used for this search, including discovery mode and Sales Navigator URL if used.

Search Summary Tab

An overview of how the search was conducted: time taken, sources searched, data completeness metrics, and Evaboot credits consumed (if applicable).

Exporting Results

On the Companies tab, click "Export Excel" for a formatted .xlsx file or use the CSV dropdown for a CSV export. Files include all companies, contacts, scores, and details — ready to import into your CRM.

8. Understanding BANT Scores

Every company is scored on 4 dimensions, each rated 0-5:

Letter	Dimension	What It Measures
B	Budget	Does the company have the financial capacity?
A	Authority	Did we reach the right decision-maker?
N	Need	Does the company have a clear need for your offering?
T	Timing	Is there urgency or a near-term trigger?

Total score is out of 20. The color-coded labels mean:

Score Range	Label	What It Means
16-20	HOT	High-priority lead — reach out immediately
12-15	WARM	Good potential — worth pursuing soon
9-11	COOL	Some potential — may need nurturing
0-8	COLD	Low match — deprioritize for now

9. Managing Saved ICPs

The Saved ICPs page lists all your ICP configurations. From here you can:

- Search: Use the search bar to filter by name or description
- View Details: Click any card to see the full ICP configuration
- Edit: Click the "Edit" button or use the "..." menu on any card
- Run Pipeline: Use the "..." menu and select "Run Pipeline" to start a new search
- Delete: Use the "..." menu to delete an ICP you no longer need
- Import from Excel: Use the bulk import feature for multiple ICPs

Saved ICPs page — search, edit, run, or delete your profiles

10. Using the Dashboard

Summary Tiles

- Total Searches: How many search pipelines you've run
- Qualified Leads: Total contacts found across all searches
- Companies Found: Total companies discovered

Evaboot / Sales Navigator Status

The dashboard shows your Evaboot credit balance, daily extraction limits, Sales Navigator session status, and your personal usage. Recent Evaboot searches are listed with credits consumed and companies found. Click the Refresh button for a live quota check.

Recent Searches

Cards showing your latest searches with status badge (Completed, Running, Awaiting Review, Cancelled, Failed), company/contact counts, ICP details, and discovery mode indicator. Use the search bar and status filters to find specific searches.

The screenshot displays the qlGen Dashboard interface. At the top, a navigation bar includes links for Home, Dashboard (active), All Leads, Saved ICPs, Tools, Users, and Feedback. A user profile icon and the GadgEon logo are also present.

11. AI Co-pilot

The qlGen Co-pilot is an AI assistant available on every page. Click the sparkle button in the bottom-right corner to open the sliding panel.

The Co-pilot is context-aware — it knows which page you're on and provides relevant suggestions. On the Dashboard, it offers data overviews, best leads analysis, industry breakdowns, and geographic distribution insights.

What You Can Ask

- Ask about your leads, companies, or search results
- Get AI-powered research and recommendations
- Explore data with semantic search across your companies
- Get industry breakdowns and geographic distributions
- Find the best leads across all your runs

Co-pilot panel — context-aware suggestions on the Dashboard

12. Help & Feedback

Click the question mark icon (?) in the top-right corner to access the Help menu with three options:

1. User Guide — Opens this PDF documentation
2. Submit Feedback — Opens a modal to submit feedback, complaints, bug reports, or feature requests
3. My Submissions — View your submitted feedback with status updates and admin replies

Help menu — User Guide, Submit Feedback, and My Submissions

Submitting Feedback

When you click "Submit Feedback", a modal appears where you can:

- Choose a type: Feedback, Complaint, Bug Report, or Feature Request
- Enter a subject line
- Provide a detailed description

After submission, you can track your feedback status (Open, In Progress, Resolved, Closed) and see admin replies via "My Submissions".

13. Admin Features

Admin users have access to additional features:

User Management

The Users page lets admins manage user accounts, view roles (Super Admin, Admin, User), and monitor activity.

User Management page

Tools Registry

The Tools page shows all external tools/APIs used by qlGen, their availability status, and rate limits. Admins can monitor tool health and usage.

14. Bulk Import: Multiple ICPs from Excel

If you need to create several ICPs at once:

1. Go to the Saved ICPs page
2. Click "Import from Excel", or use the import option in the ICP wizard
3. Download the template — it has sheets matching the ICP dimensions
4. Fill in your data. Use the "ICP Name" column to define multiple ICPs
5. Upload the completed .xlsx file
6. Review the parsed ICPs and click "Save All" or "Save & Run All"

15. Tips for Better Results

1. Be specific with your ICP: The more detail you provide (industries, regions, company size, signals), the more targeted the results.
2. Use multiple target roles: Adding 3-5 leadership roles increases the chance of finding the right decision-maker.
3. Start from Sales Navigator when possible: Pasting a well-filtered search URL with Hybrid mode gives you LinkedIn's precision plus qlGen's depth.
4. Use "Fill remaining with AI": After pasting a Sales Navigator URL, click this to have AI complete urgency signals, budget signals, and other fields.
5. Review and re-run: After seeing initial results, edit your ICP to refine criteria and run a new search.
6. Export early, export often: Download the Excel file to share with your team or import into your CRM.
7. Focus on HOT and WARM leads first: Sort by final score and prioritize the top-scoring companies.
8. Monitor Evaboot credits: Check the Dashboard regularly. Narrow your Sales Navigator search to control credit usage.

16. Frequently Asked Questions

Q: How long does a search take?

A: Typically 3–8 minutes depending on the breadth of your ICP criteria. Sales Navigator extractions may add 1–3 minutes.

Q: Can I leave the page while a search is running?

A: Yes. Results are saved automatically. You can close the tab entirely and come back later via the Dashboard.

Q: How many companies does each search find?

A: Each search is configured to find up to 15 companies with up to 5 contacts per company.

Q: Can I run the same ICP multiple times?

A: Yes. Each run is independent. Re-run from Saved ICPs, Dashboard, or the "Run Again" button on results.

Q: What data sources does qlGen use?

A: Apollo.io, Exa.ai, Hunter.io, Lusha, Tavily, DuckDuckGo, direct website analysis, and LinkedIn Sales Navigator (via Evaboot).

Q: Can I edit an ICP after saving it?

A: Yes. Go to Saved ICPs, click the card, and choose "Edit". Changes don't affect previous results.

Q: What format is the export?

A: Excel (.xlsx) with formatted columns and styling, or CSV. Ready for direct use or CRM import.

Q: Do I need a Sales Navigator account?

A: No. Sales Navigator is optional. The default qlGen Multi-Source mode works without LinkedIn access.

Q: What happens if Evaboot extraction fails?

A: In Sales Navigator Only mode, the pipeline stops with an error. In Hybrid mode, it gracefully continues using qlGen's standard discovery.

Q: How do I connect my Sales Navigator account?

A: Sales Navigator is connected through Evaboot. Your admin configures the API key, and you link your account in the Evaboot dashboard.

Q: How do I submit feedback or report a bug?

A: Click the question mark (?) icon in the top-right corner and select "Submit Feedback". Choose the appropriate type and provide details.
