What is qlGen?

qlGen is an ICP-driven qualified lead generation tool with an AI co-pilot. You define your Ideal Customer Profile (ICP) — the type of company and decision-maker you want to reach — and qlGen's AI agent autonomously runs a multi-stage pipeline:

1. **Industry Discovery** — finds companies matching your industry and geography criteria
2. **Firmographic Fit** — filters by size, revenue, and other firmographic signals
3. **Budget Signals** — scores each company on financial capacity and spending indicators
4. **Urgency Signals** — scores each company on timing triggers and immediate need
5. **Contact Discovery** — identifies key decision-makers with verified emails and phone numbers

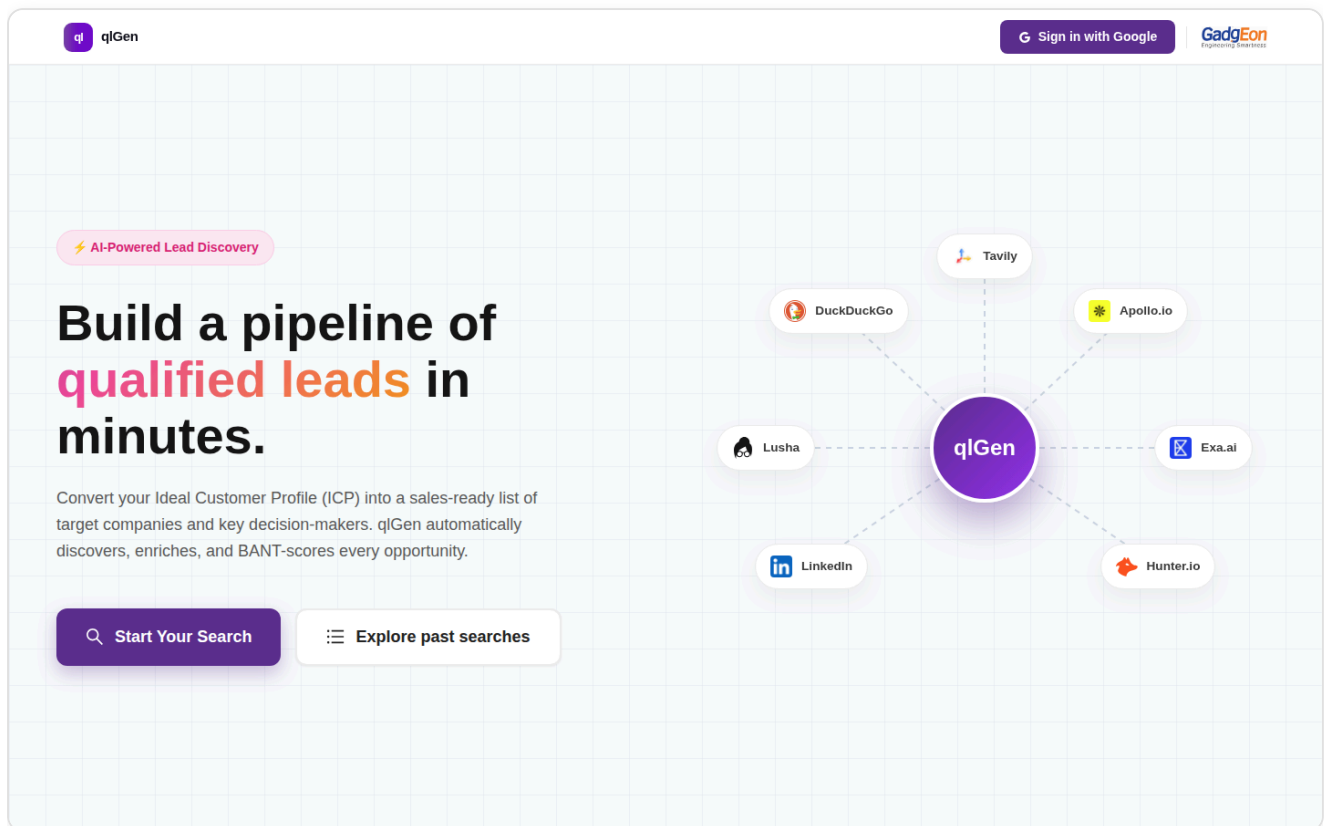

6. Final Scoring — computes composite scores and ranks all qualified companies

The result is a scored, ranked list of qualified leads you can export to Excel or CSV and start working immediately.

Signing In

qlGen uses Google OAuth for authentication. Only users with authorized email addresses can access the platform.

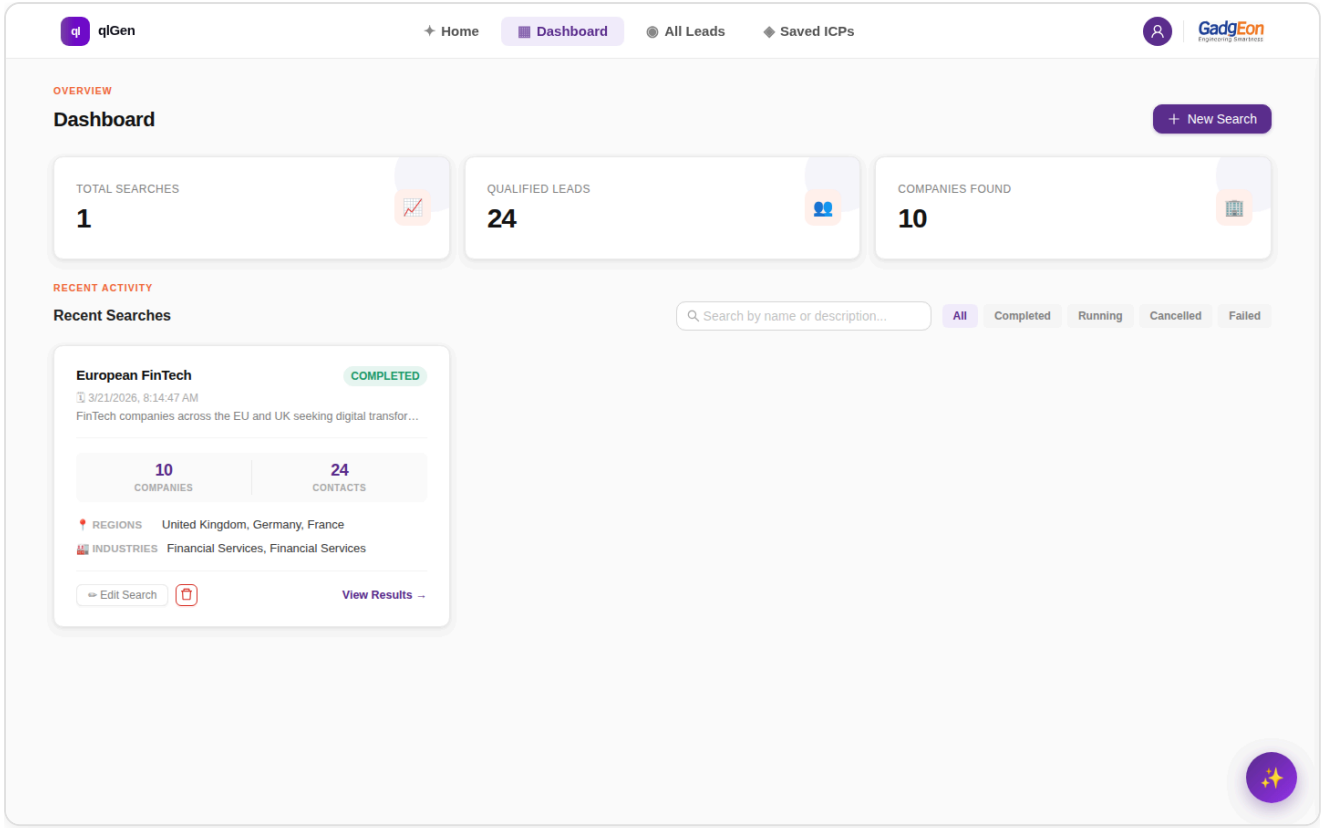

1. Navigate to qlGen in your browser
2. Click **"Sign in with Google"** on the welcome page
3. Select your Google account and authorize access

Once signed in, you'll be redirected to the Dashboard.

Dashboard

The Dashboard provides an at-a-glance overview of your lead generation activity.

Overview Tiles

Three summary tiles at the top show aggregate metrics:

Tile	What It Shows
Total Searches	Number of pipeline runs across all your ICPs
Qualified Leads	Total contacts discovered across all runs
Companies Found	Total companies that passed all pipeline stages

Search History

Below the tiles, cards display your recent searches with:

- Status badge (Completed, Running, Failed)
- Company and contact counts
- ICP name and key criteria
- Quick actions: view results, edit the ICP, or re-run the pipeline

Use the **search bar** and **status filter chips** (All, Completed, Running, Cancelled, Failed) to find specific searches.

Creating a Search (ICP Wizard)

An ICP (Ideal Customer Profile) defines the exact type of company and decision-maker you're looking for. The wizard has 6 steps.

Step 1: Firmographics

Define the basic characteristics of your target companies.

The screenshot shows the 'qIGen' interface with a navigation bar at the top containing 'Home', 'Dashboard', 'All Leads', and 'Saved ICPs'. A user profile icon and 'Gadgeon' are on the right. The main heading is 'SEARCH CRITERIA CONFIGURATION' with a sub-heading 'Edit Search Criteria' and a 'Back' button. On the left, a vertical list of steps is shown: 1 Firmographics (active), 2 Capability, 3 Urgency, 4 Budget, 5 Authority, and 6 Review. The form fields are as follows:

- Name:** A required text field containing 'European FinTech'.
- Description:** A text area containing 'FinTech companies across the EU and UK seeking digital transformation and regulatory compliance solutions'.
- Industry Verticals:** A section with two rows of input fields. The first row contains 'Financial Services' and 'FinTech' with a 'Remove' button. The second row contains 'Financial Services' and 'Digital Banking' with a 'Remove' button. Below these is a '+ Add Industry' button.
- Target Countries:** A section with a row of selected countries: 'United Kingdom', 'Germany', 'France', and 'Netherlands', each with a close button. Below is an input field with 'e.g., United States' and an 'Add' button.
- Employee Count Range:** A section with 'Min' (50) and 'Max' (2000) input fields.
- Revenue Range:** A section with a currency dropdown set to 'EUR', and 'Min' (10,000,000) and 'Max' (500,000,000) input fields.
- Low Cost Center:** A toggle switch labeled 'Target companies with low-cost center operations', which is currently turned off.

A 'Next' button is located at the bottom right of the form.

- **Name** (required): Give this search a descriptive name, e.g., "US Enterprise SaaS Q1 2026"
- **Description:** Optional summary
- **Industry Types:** Add one or more industry verticals with optional sub-verticals
- **Geography:** Select target countries
- **Revenue Range:** Set min/max revenue and currency
- **Employee Range:** Set min/max headcount
- **Low-Cost Center:** Toggle if targeting companies with R&D/operations centers in low-cost regions

Tip: Click "**Create with AI / Upload**" at the top of this step to import ICP data from an Excel template or generate criteria with AI assistance.

Step 2: Capability

Specify what offerings or services you want to sell.

qIGen

Home Dashboard All Leads Saved ICPs

Gadgeon

SEARCH CRITERIA CONFIGURATION

Back Edit Search Criteria

1 Firmographics

2 Capability

3 Urgency

4 Budget

Target Offerings / Service Areas

Regulatory compliance automation × Open banking API development × Payment processing modernization ×

e.g., Platform engineering & replatforming Add

Match Condition

AND
Company must match ALL offerings

OR
Company must match ANY offering

Previous Next

- **Target Offerings:** Add the products/services you offer (e.g., "Cloud migration services", "Platform engineering")
- **Match Condition:** Choose **AND** (company must match all) or **OR** (company must match any)

Step 3: Urgency

Define signals that indicate a company has an immediate need.

The screenshot shows the 'qIGen' application interface. The top navigation bar includes 'Home', 'Dashboard', 'All Leads', and 'Saved ICPs'. A user profile icon and 'Gadgeon' are on the right. On the left, a vertical sidebar shows a progress list: 'Firmographics' (checked), 'Capability' (checked), 'Urgency' (active, highlighted with a purple circle and number 3), 'Budget' (4), 'Authority' (5), and 'Review' (6). The main content area is titled 'SEARCH CRITERIA CONFIGURATION' and 'Edit Search Criteria'. It features a 'Back' button. The 'Urgency Signals' section contains three tags: 'PSD3 regulatory deadline approaching', 'Digital banking license obtained', and 'Partnership with major bank announced'. Below these is a text input field with the placeholder 'e.g., Recent funding round, Leadership change, Regulatory deadline' and an 'Add' button. A note states: 'Add signals that indicate a company has an urgent need. These are free-form — type your own signals based on your domain expertise.' The 'Match Condition' section offers two options: 'AND' (Company must show ALL signals) and 'OR' (Company must show ANY signal). At the bottom are 'Previous' and 'Next' buttons. A purple star icon is in the bottom right corner.

- **Urgency Signals:** Add triggers like *"Recent funding round"*, *"New CTO hired"*, *"Regulatory deadline"*
- **Match Condition:** AND or OR logic for how signals are evaluated

Step 4: Budget

Define signals that indicate a company has the budget to buy.

qIGen

Summary

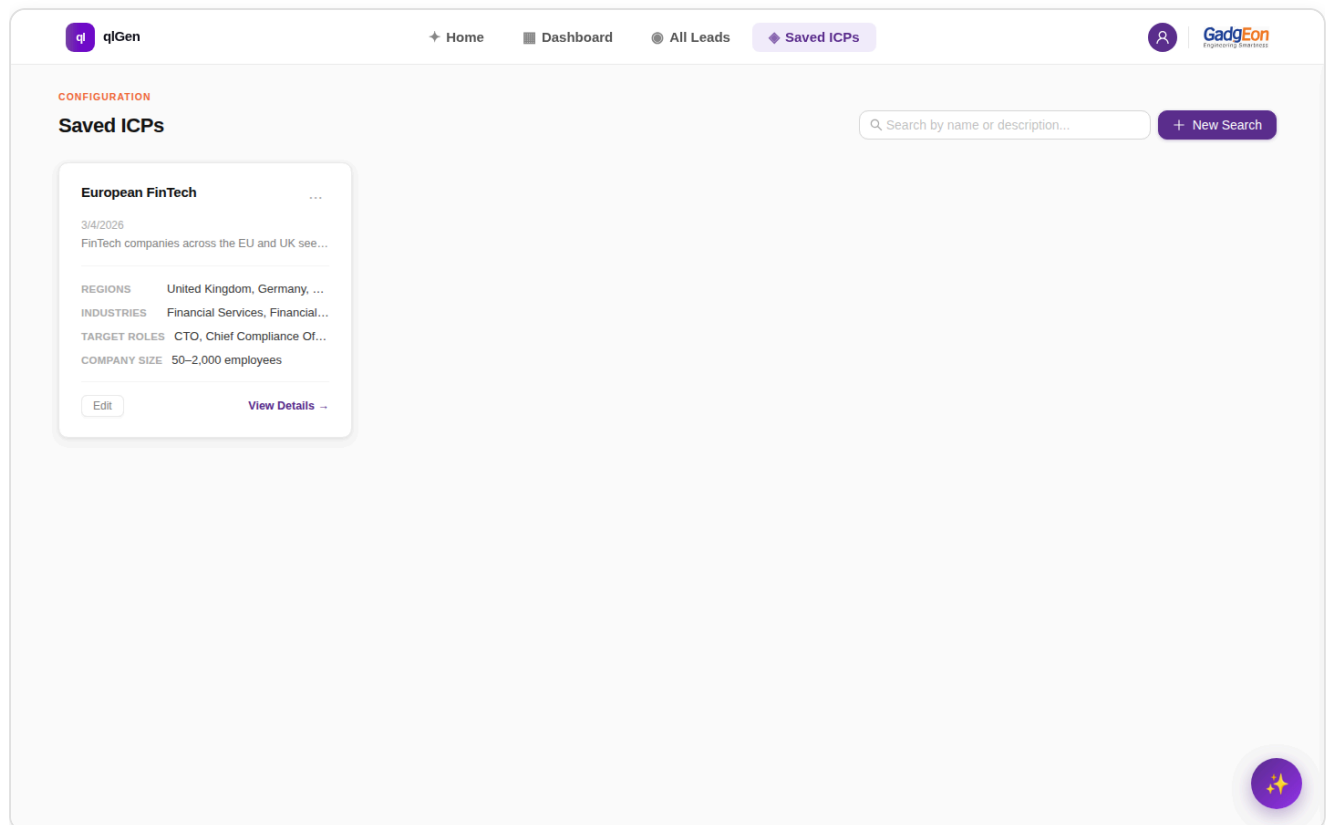

Name	European FinTech		
Description	FinTech companies across the EU and UK seeking digital transformation and regulatory compliance solutions		
Industries	Financial Services / FinTech, Financial Services / Digital Banking		
Countries	United Kingdom, Germany, France, Netherlands	Employees	50–2,000
Revenue	EUR 10,000,000–500,000,000	Low Cost Center	No
Target Offerings	Regulatory compliance automation, Open banking API development, Payment processing modernization OR		
Urgency Signals	PSD3 regulatory deadline approaching, Digital banking license obtained, Partnership with major bank announced OR		
Budget Signals	Series B+ funding in last 12 months, Compliance budget increase, Technology transformation budget allocated OR		
Target Roles	CTO, Chief Compliance Officer, Head of Engineering, VP Product		

Previous
Save Only
Run Pipeline

- Scan the summary to make sure nothing is missing
- Click **"Run Pipeline"** to save and immediately start the lead generation pipeline
- Click **"Save Only"** to save the ICP for later

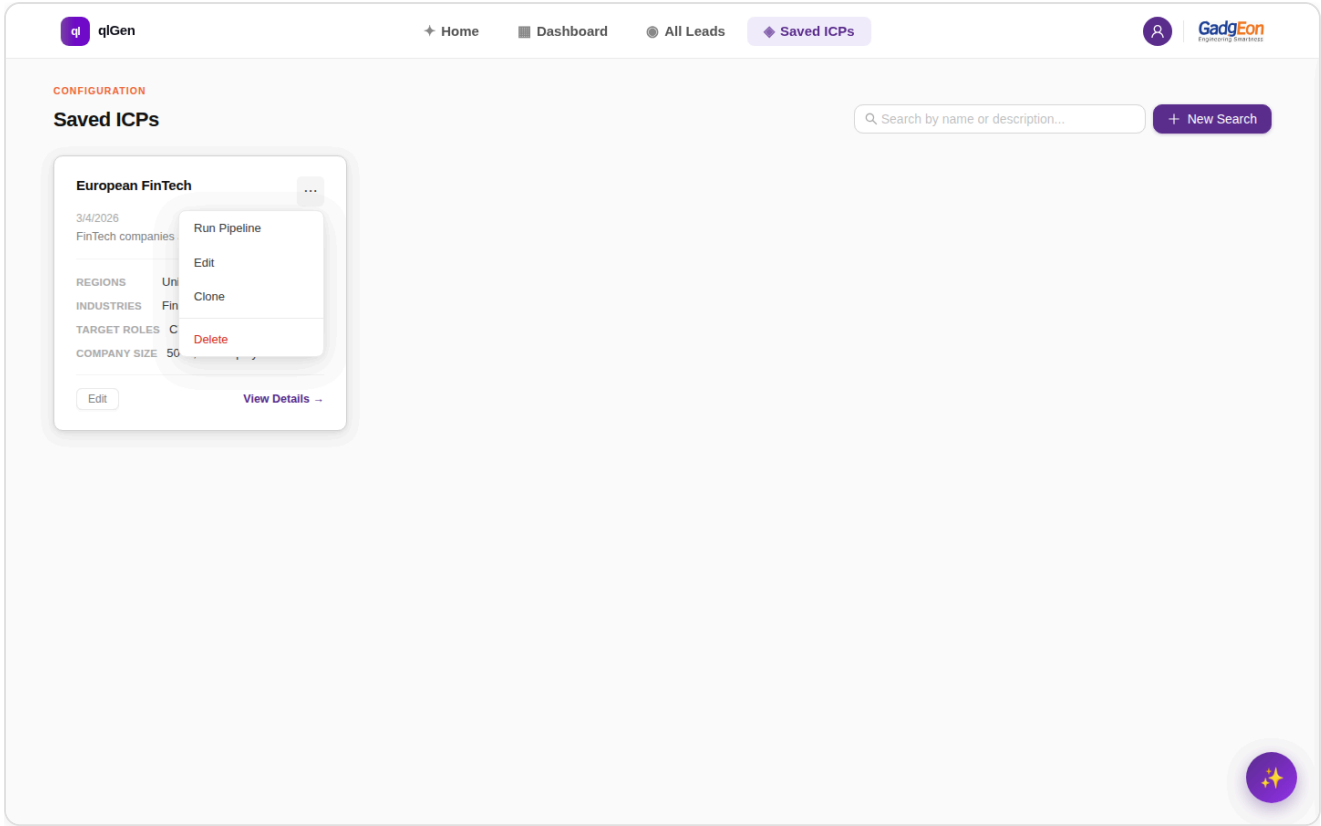

Managing Saved ICPs

The **Saved ICPs** page lists all your ICP configurations as cards.

Actions

Click the **menu button** (three dots) on any card to see options:

Action	What It Does
Run Pipeline	Start a new search using this ICP
Edit	Open the wizard to modify criteria
Clone	Create a copy of this ICP (useful for variations)
Delete	Remove the ICP (soft delete)

Cloning an ICP

Cloning creates an exact copy of an ICP with "Copy of " prefixed to the name (e.g., "Copy of US Enterprise SaaS"). The clone opens directly in the Review step so you can adjust any criteria before saving. This is useful when you want to create a variation — for example, the same industry criteria but targeting a different geography.

Watching the Pipeline

After clicking "**Run Pipeline**", you're taken to the Pipeline Progress page where you can watch the AI agent work in real time.

The screenshot displays the qIGen dashboard interface. At the top, a navigation bar includes the qIGen logo, a 'Home' button, a 'Dashboard' button (highlighted), and links for 'All Leads', 'Saved ICPs', 'Tools', and 'Users'. A user profile icon and 'Gadgeon' text are on the right.

The main section is titled 'SEARCH PROGRESS' and 'Search Complete'. Below this, a 'Progress Details' section shows a horizontal timeline of eight stages, each with a green checkmark and a 'View results' link: Industry Discovery, Firmographic Fit, Review & Select, Budget + Urgency Signals, Review Signals, Contact Discovery, and Final Ranking. A large green checkmark icon is centered below the timeline.

Below the progress section, a 'Search Complete' message states 'Found 132 companies and 49 contacts'. Two buttons, 'View Leads' and 'Dashboard', are positioned below the message.

The bottom section is titled 'Activity Log' with a sub-header '300 tool calls'. It contains a list of activity items, each with a status icon, a title, and a timestamp. The items include:

- 'Searching business intelligence sources' (259781s): A message about a discrepancy in leadership information between US and global sites.
- 'Perfect! Now I have clear information about the leadership c...' (259781s): A message confirming clear information about leadership changes.
- 'Searching business intelligence sources' (259781s): A message about searching for Chief Medical Officer or Chief Quality officers.
- 'Now let me try to find email patterns for the domain:' (259781s): A message about finding email patterns.
- 'Searching the web' (259781s): A message about finding email patterns.
- 'Great! Now I have the email pattern. Let me compile all the ...' (259781s): A message about compiling information and providing a JSON output.

The page shows:

- **Stage progress:** Each pipeline stage (Industry Discovery, Firmographic Fit, Budget Signals, Urgency Signals, Contact Discovery, Final Scoring) with status indicators
- **Activity log:** A real-time feed of tool calls, data source lookups, and agent reasoning
- **Running totals:** Companies found, contacts discovered, tool calls made, and elapsed time

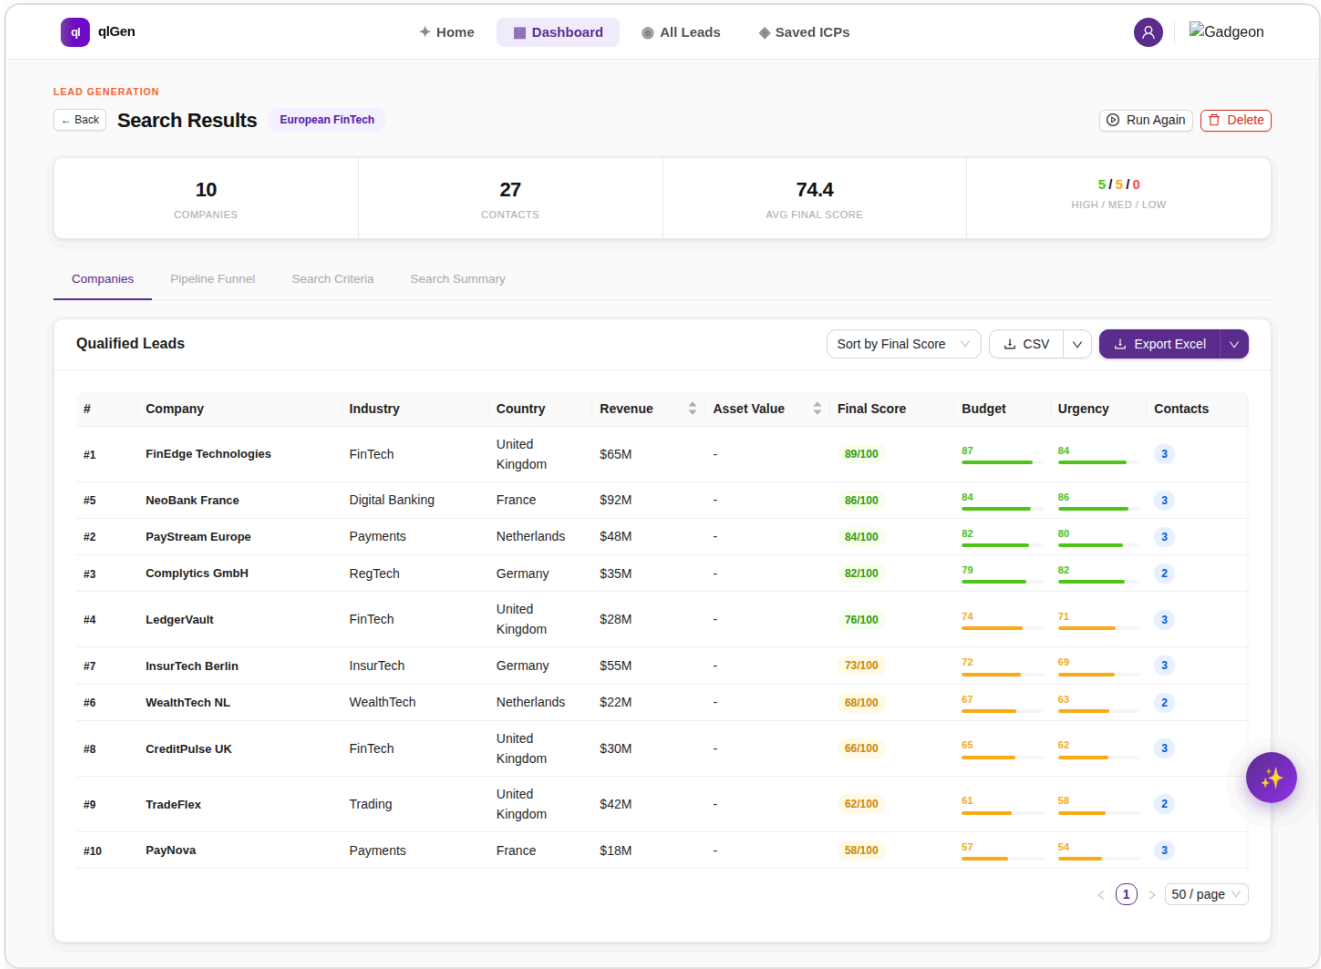

You can safely leave this page. Results are saved automatically. Return anytime via the Dashboard.

Viewing Results

When the pipeline completes, navigate to the results page. It has four tabs.

Companies Tab

The default view showing all discovered companies and their scores.

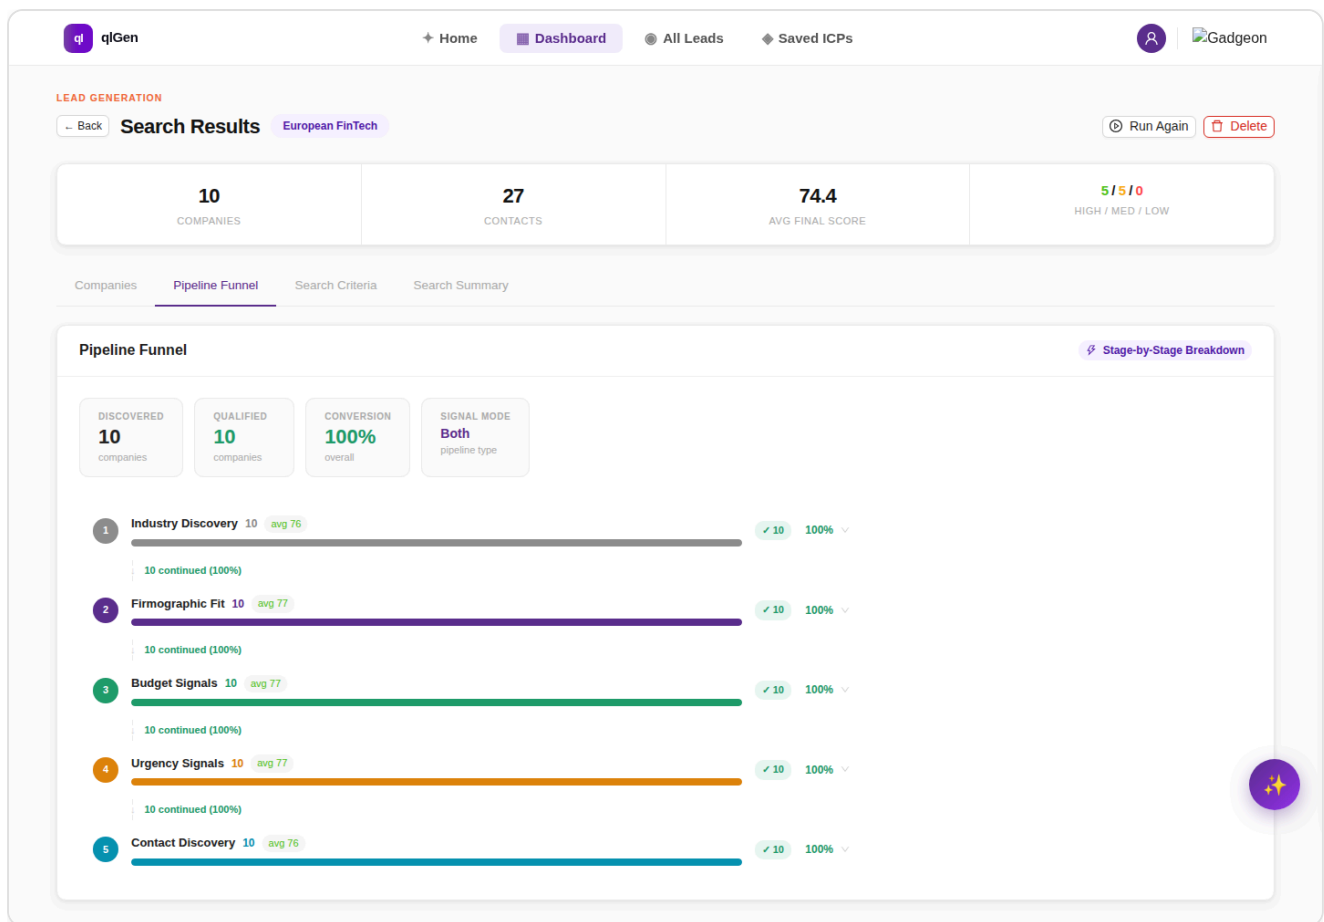

Each company row shows:

- Company name and industry
- Final score (0-100) with color-coded rating (green = High, amber = Medium, red = Low)
- Budget and urgency signal score bars
- Country, revenue, and contact count
- Click any row to open the company detail page

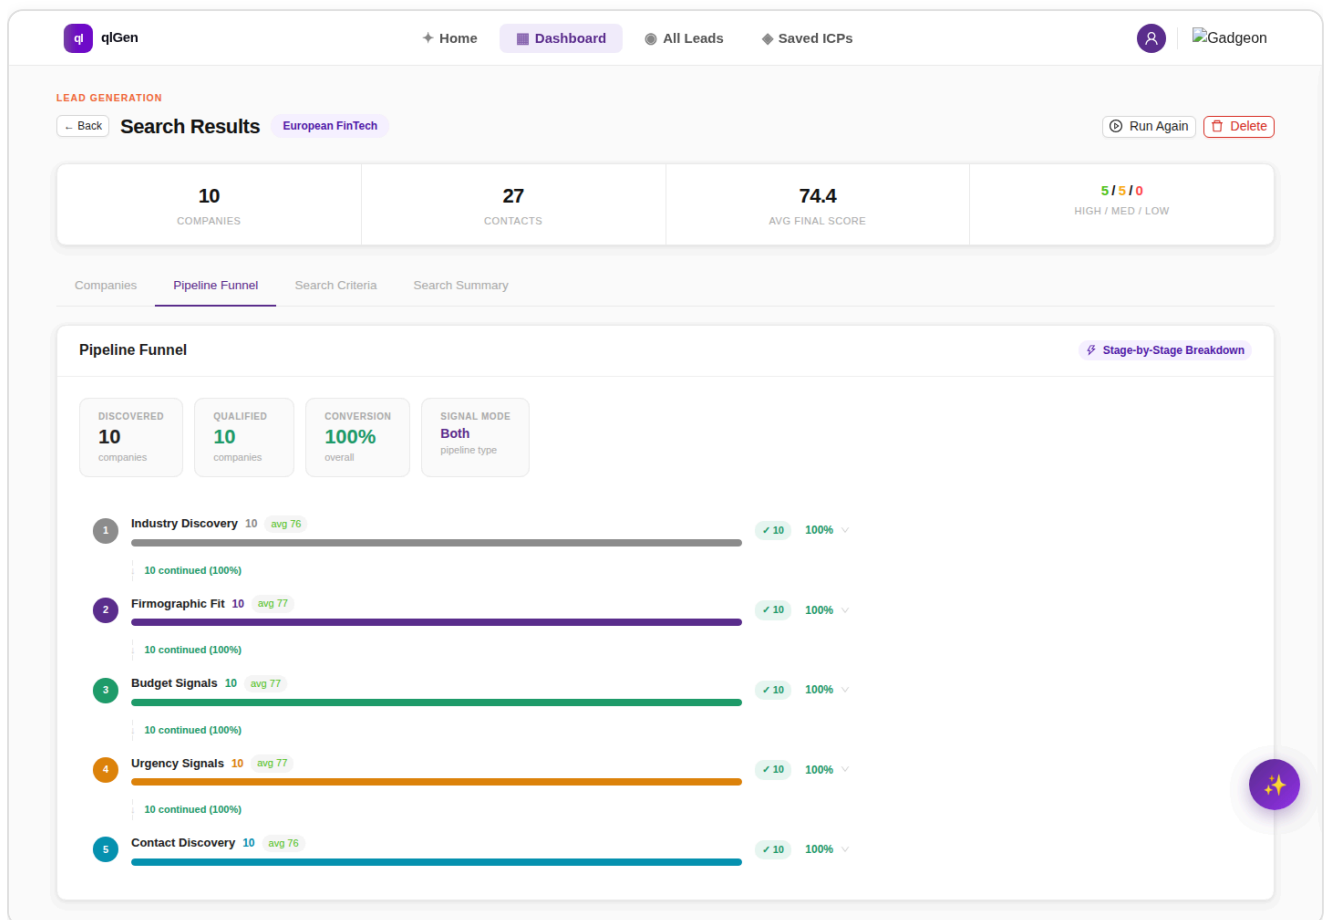

Use the **sort dropdown** to reorder by Final Score, Budget Score, Urgency Score, or other criteria. Click **Export Excel** or **CSV** to download.

Pipeline Funnel Tab

A visual breakdown of how companies progressed through each pipeline stage.

Click any stage row to expand it and see which companies passed or were filtered out:

Search Criteria Tab

Displays the ICP configuration that was used for this particular search.

- **Industry** dropdown: Filter by company industry
- **Country** dropdown: Filter by geography
- **Search bar**: Free-text search by company name or website
- **Sort dropdown**: Order by Final Score, Budget Score, Urgency Score, etc.

Active filters show a **"Clear filters"** link to reset.

Exporting Data

From the Companies tab on any search results page:

- Click the **Export** button dropdown
- Choose **CSV** for a simple comma-separated file
- Choose **Excel** for a formatted `.xlsx` file with styled columns

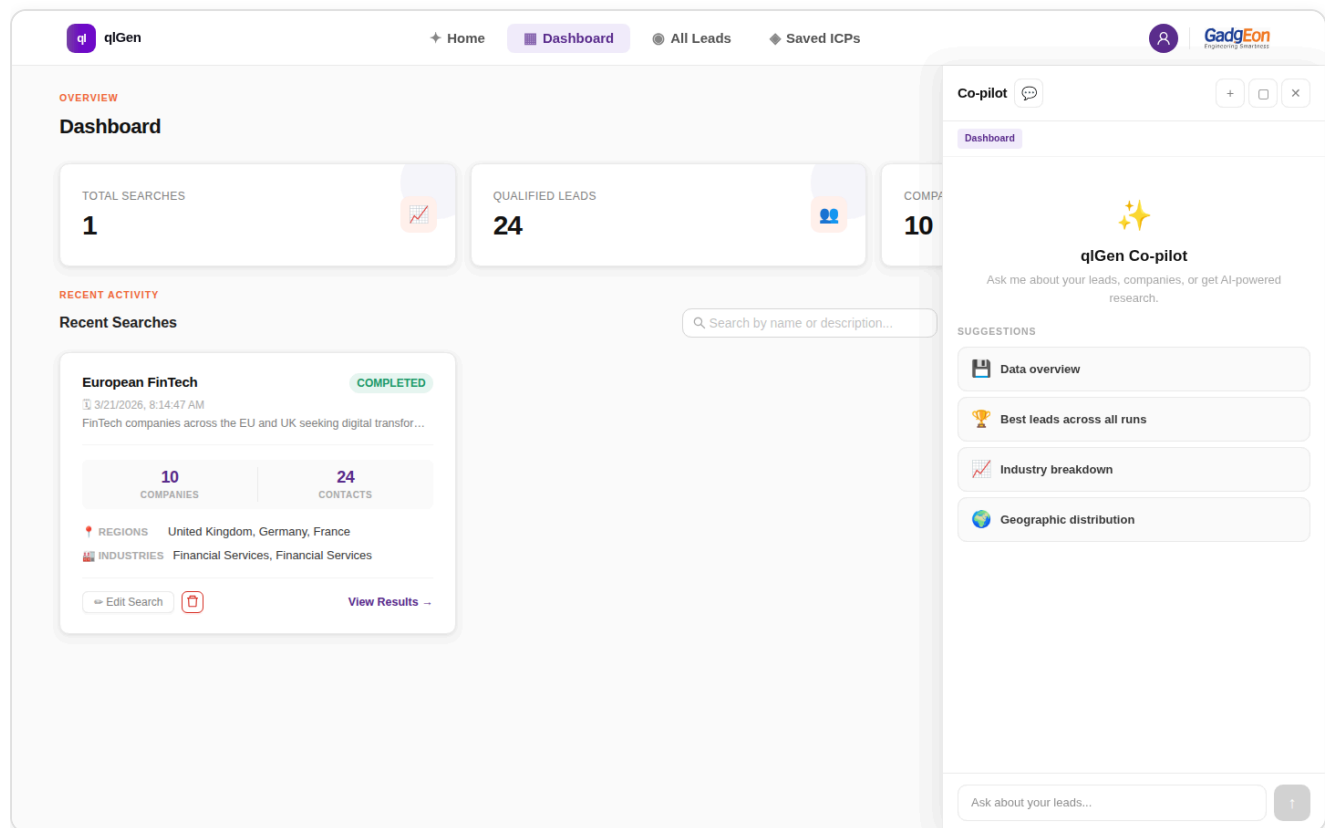

The export includes all companies, contacts, scores, and signal details — ready to import into your CRM or share with your team.

Co-Pilot Assistant

qlGen includes an AI co-pilot that can answer questions about your leads, provide research insights, and suggest next steps.

Opening the Co-Pilot

Click the **floating action button** (sparkle icon) in the bottom-right corner of any page.

What It Can Do

- **Search your data:** Ask questions like "Which companies have the highest urgency scores?" or "Show me leads in the UK"
- **Company research:** Request deeper analysis — "Tell me more about Meridian Software" or "What are FinEdge Technologies' recent news?"
- **ICP recommendations:** Get suggestions for improving your search criteria
- **Context-aware:** The co-pilot knows which page you're on and adjusts its suggestions accordingly

Tips for Using the Co-Pilot

- Be specific in your questions for better results
- Use the **recommendation chips** that appear below the welcome message for quick starting points
- Start a **new chat** (+ button) when switching topics

- The co-pilot has access to both your database and external research tools

Admin Features

The following features are available to **Super Admin** users only. The Tools and Users pages appear in the top navigation bar only for Super Admins.

User Management

Manage team access from the **Users** page (accessible from the top navigation bar).

Displays all pipeline runs across all users with status, timing, and result counts.

Tips for Better Results

1. **Be specific with your ICP:** The more detail you provide across all steps (industries, signals, roles), the more targeted the results will be.
2. **Use multiple target roles:** Adding 3-5 leadership titles (e.g., CTO, VP Engineering, Head of Digital) increases the chance of finding the right decision-maker at each company.
3. **Add technology signals:** If your offering relates to specific tech stacks, mention them in the urgency or budget signals.
4. **Use both Budget AND Urgency signals:** Companies with strong scores in both dimensions are more likely to convert.
5. **Clone and iterate:** After reviewing initial results, clone your ICP, adjust criteria, and run again. Each run is independent.
6. **Focus on High-scoring companies first:** Sort by Final Score and prioritize the green-labeled companies for outreach.
7. **Use the co-pilot for deeper research:** Before reaching out to a lead, ask the co-pilot for recent news, competitive context, or executive background.
8. **Check the Pipeline Funnel:** If many companies are filtered out at a specific stage, consider loosening those criteria.

Frequently Asked Questions

Q: Can I leave the page while a pipeline is running? Yes. Results are saved automatically. Return anytime via the Dashboard.

Q: How many companies does each search find? There is no fixed cap. The pipeline casts a wide net in Stage 1 (aiming for hundreds of candidates), then progressively filters through firmographic fit, signal scoring, and contact discovery. The final count of qualified companies depends on how many match your ICP criteria — typical runs surface anywhere from a handful to 50+ qualified leads.

Q: Can I run the same ICP multiple times? Yes. Each run is independent. Use "Run Pipeline" from the Saved ICPs page, the Dashboard card, or the Pipeline page.

Q: What data sources does qlGen use? The pipeline draws on 30+ data sources across all stages, including Apollo.io, Exa.ai, Hunter.io, Lusha, Tavily, DuckDuckGo, Wikidata, SEC EDGAR, government company registries (UK, France, Nordic countries), GitHub, Google Custom Search, patent databases, press releases, ProductHunt, Y Combinator, SimFin, and direct website scraping. The co-pilot has access to additional research tools on top of these.

Q: Can I edit an ICP after saving it? Yes. Go to Saved ICPs, click the card, and choose Edit. Changes don't affect previous search results.

Q: What format is the export? Excel (.xlsx) with formatted columns and styling, or CSV. Both are ready for CRM import.

Q: How are companies scored and categorized?

All scores use a 0-100 scale. The summary bar on the results page shows a High / Med / Low breakdown:

Label	Final Score	Meaning
High	75-100	Strong match — prioritize for outreach
Medium	50-74	Good potential — worth pursuing
Low	25-49	Weaker match — may need nurturing
Very Low	Below 25	Minimal match — deprioritize

Q: What does "On-Demand Discovery" do? It re-runs signal detection or contact search for a single company. Use it when data is stale or you want more detail before outreach.

Q: Who can see my searches? Regular users see only their own searches and results. Admins and Super Admins can view all users' data.

For technical support or questions, contact your system administrator.
